

overdub STUDIO becomes voyzSESSION — the voice workstation for voice-over, podcast and audiobook

pegelWERK renames its voiceover DAW and brings a year of development together under a new name. Existing licenses, projects and settings carry over unchanged — and the update is free.

Siegburg, Germany, 10 July 2026 — pegelWERK is giving its voiceover software **overdub STUDIO** a new name: **voyzSESSION**. The change is purely cosmetic — feature set, projects, settings and licenses all carry over in full, and existing customers receive the update free of charge.

voyzSESSION records or imports speech and, with a single click, delivers a broadcast- and streaming-ready mix at R128 loudness. Three automations do the work: **Auto Edit** cuts, **Auto DSP** polishes the voice, and **Auto Mix** mixes and normalises to the chosen target. A **speech-aligned prompter** (macOS and iPad) follows the recognised speech, and the export can embed the finished narration straight back into the source video.

GROWN SINCE THE LAST PRESS UPDATE

- **Format profiles** set the loudness target and tone in one click: EBU R128, Podcast (–16 LUFS), YouTube, audiobook, sports and more.
- **Neural noise removal** (DeepFilterNet 3) pulls studio quality out of a noisy room, on-device, in per-track stages.
- **Multitrack with automatic speaker balancing** (Dugan-style) keeps multiple hosts or guests even and pump-free.
- **Music/FX bed with auto-ducking** lowers intros, outros and beds automatically under speech.
- **Real-time voice chain** with instantly audible controls for EQ, compression, warmth, air, de-esser and breath control.

AVAILABILITY & PRICE

voyzSESSION is available for macOS as a subscription (€24.99 per month or €249 per year) and for iPad as an App Store subscription. It runs natively on Apple Silicon and Intel (universal binary) and requires macOS 12 or later. More at pegelwerk.com.

ABOUT PEGELWERK

pegelWERK is an independent audio-software studio based in Siegburg, Germany, founded by Sascha Hömske. The lineup comprises six native apps for macOS, iPadOS and iPhone across broadcast, post-production and voiceover: broadcast METER, mini METER, loudness CORRECT, easy EDITOR, instant PLAYER and voyzSESSION. All apps share the same EBU R128 DSP engine.
